**Make
\$20,198.16
In No Time
Flat With
ETFs!**

IMPORTANT EDITORS NOTE!

We originally published this report, almost a decade ago, back in 2014... and it was updated in 2018... and now we're updating it again in 2023.

Since that time, the Dividend ETF we describe in this report has been one of our biggest Winners!

Not to steal the thunder of the report, but look at how this ETF has grown since 2013:

As you can see, the ETF has been on an amazing run... but let me really put that into perspective:

As you can see from the performance chart... the ETF is up over 186%...

Yes, you would have almost tripled your money on just the stock... But wait... There's More!

Remember this is a high Yield Dividend Stock ETF.

Just look at this chart... it shows each of the dividend payouts made... It's AMAZING!

I took a few moments and added up all of the dividend payouts...

Since January 2013, this ETF has paid out over \$25.87 in Dividends... YES - you would have made \$25 over the last few years... keep in mind - this stock was priced around \$50 in 2013.

So you'd have made a nearly 50% return IN CASH on this one investment.

Plus you would have locked in a 186% gain on the Price of the ETF itself!

It goes to show that our original premise on the ETF and the potential returns is spot on.

We still think it's one of the most exciting investments out there!

I estimate we might see this ETF spin off at least \$75 in Dividends...

Right now the stock is trading around \$102 a share... if we see the same 186% growth rate... that implies a price of \$291.

So if you buy 100 shares today... you should make \$26,472...

Now imagine if you had 200 shares... or 2,000 shares!

Full disclosure - I own this ETF, and I'm buying more shares...

Below, you'll find the original version of the report (with a few updates added for clarity). So without further delay - how to make \$20K with an ETF!

How To Make \$20,198.16 In No Time Flat!

“Traders, individual investors and financial advisers are increasingly using the low-cost ETFs, which are essentially mutual funds that trade like stocks, to buy entire market sectors rather than researching and purchasing individual stocks.”

-USA TODAY | June 2013

I know you could use an extra \$20,198.16. Right?

You might have a new baby on the way, or you're changing careers, or looking for a way to help pay your college bound child's sky high tuition, room, and board.

After all, there's nothing like a life changing event to give you kick in the back side toward thinking about your family's financial security.

Maybe you're dying to buy a vacation home. Or take that once in lifetime vacation. Or finally buy that hot rod you've been eyeing for the last 20 years.

And wouldn't it be great if your rainy day fund was a little fatter? Just in case...

Or are you one of the near-retirement American households with a paltry \$12,000 in retirement savings?

Whatever your reason is – **Dividends on ETFs are a great way to go.**

In just a minute, I'll show you how you can use our ETF dividend growth strategy to create \$20,198.16 OR MORE for you and your family.

And here's the best part...

You can do it in a safe and secure way. You don't need to risk it all on some biotech or a risky tech startup company.

Nope, you'll find the right ETFs are superior to just about any other investment when it comes to safely and securely collecting dividends from the fastest dividend growth stocks around.

Let's start with what makes Exchange Traded Funds or ETFs such a great way to invest.

Three Reasons ETFs Are Better Than Stocks And Mutual Funds

As you may know, owning a share of an ETF represents ownership of a basket of assets, usually stocks. So, with one purchase, you own a piece of all the stocks in the ETF.

The basket of companies owned by an ETF is determined by the index it's following. The ETF seek to mirror the returns of the index. In fact, some of the most widely know and traded ETFs mirror the major indexes.

For example, the SPDR S&P 500 (SPY) represents ownership in the 500 stocks making up the S&P 500 Index. The Diamonds Trust (DIA) represents ownership in the 30 stocks making up the Dow Jones Industrial Average Index. And the PowerShares QQQ (QQQ) represents ownership in the 100 stocks making up the NASDAQ 100 Index.

That's our first reason - ETFs give you instant diversification.

Obviously, owning a basket of different dividend paying stocks protects you from an individual company cutting their dividend. It's unlikely that all of the companies in an ETF will cut their dividend so our ETF dividend strategy is more likely to deliver a steady stream of cash.

Our second reason is ETFs can be traded just like a stock.

They have their own ticker symbol and you can buy or sell them anytime the markets are open. Mutual fund shares on the other hand may only be purchased or redeemed after the close of the market.

And our third reason is ETFs are taxed at normal rates.

ETFs are tax efficient investment vehicles. You typically don't have capital gains taxes on an ETF until after you sell it.

What's more, using an ETF to invest in high yielding companies like master limited partnerships (MLPs) can make your life much simpler during tax time.

If you invest directly in an MLP you'll need to file a K-1 because you're technically a silent partner. But with some ETFs that invest in MLPs you'll simply pay taxes the same way as you do with any other ETF.

Now let's look at our ETF dividend growth strategy in action...

The Power Of ETF Dividend yields

"Dividends are a good long-term theme."

-Russ Koesterich | CIS at Blackrock

This strategy is based on two ways of making money... First it focuses on the growth rate of a stock, and Second it adds in the Dividend payouts and dividend growth!

Here's how it works...

The growth rate of a stock is very simple... you buy the stock for \$10 and the next year it's at \$11... you have a 10% growth rate. Where this really gets exciting is when you start to compound that growth.

So back to our example, your \$10 stock has grown to \$11 after one year... not bad... but let's say it grows another 10% in year 2...well... that \$11 stock becomes \$12.10... and in year three it grows another 10% becoming \$13.31.

Notice how in the first year you made only \$1, but in year two you made \$1.10 and in year three you made \$1.21... not only does your original investment gain in value, but the gain you show should grow as well!

But that's just part one.

Part two is where it really gets exciting.

This is where you start adding in dividends... and dividend growth. Just like our example with compounding values, it applies to the growth rate of your dividends too.

Think about it... if you buy the right stock, you get not only a growing stock price, but a nice dividend. And that dividend grows too!

So what investment are we talking about here?

Take a look at **Vanguard High Dividend Yield ETF (VYM)**.

It tracks the performance of the FTSE High Dividend Yield Index, which consists of common stocks of companies that pay dividends that generally are higher than average.

Put bluntly, they look for stocks with big FAT dividends and invest.

Over the last 5 years VYM's performance has been astounding.

In 2010 you could scoop up the ETF for a paltry \$34.67 a share. 5 years later you can grab that same ETF for a whopping \$67.52.

In price appreciation alone, that's a \$32 dollar gain.

But the number we really care about is the CAGR - the Compound Average Growth Rate. That number is a staggering 13.26%...

In other words the stock has grown by 13.2% every year since 2010.

But that's not all... the dividend has been on a rocket-ship too.

In the last 12 months, VYM paid out \$2.18 in dividends... up from \$1.09 in the same period a few years ago. So in 5 years the dividend has doubled in value...

But, once again let's look at the CAGR.

The Dividend Growth CAGR is up over 14%.

Does that mean it will always be up 14% every year? NOPE... for example, in one year dividend growth was up over 9% and in a different year it was up over 16%.

But let's just keep the average... 14%

That's an astounding growth rate, both for the stock and the dividend.

So, let's put it all together.

Let's say you go out and buy 100 shares of VYM right now.

The Stock price is \$70.56.

So, you spend out of pocket \$7,056.00

Now here's what you could get in return.

If the stock is able to continue climbing at a 13.2% growth rate for the next 10 years... the stock price will grow to \$243.79... a profit of \$173.23 a share

And then you have the dividends.

If the dividends continue to grow at 14% year after year, you'll get in year 10 a fat dividend of \$8.08 - PER SHARE!

Over 10 years the total take in dividends will be a whopping \$48.06 a share!

So let's add this all up...

You make \$173.23 a share in appreciation PLUS another \$48.06 in dividends giving you a profit of \$221.29 PER SHARE...

So if you have 100 shares times \$221.29 profit your total take is a whopping \$22,129.09

To put it another way, if you buy 100 shares of VYM today you'll rake in \$22,129.09 over the next ten years... all for doing nothing!

Just imagine having 200 shares or 2,000 shares!

With 2,000 shares, you'd have the potential to make \$442,581.80 over 10 years!

Just think how 442 grand would change your life!

A Final Word

If you've made it this far, you no doubt understand the massive wealth building opportunity available with our ETF dividend growth strategy.

With a single trade, you get the flexibility of a stock combined with the diversification of a mutual fund. There's no question, ETFs give you the best of both worlds. What's more, most ETFs provide plenty of liquidity at a relatively low cost.

No other investment vehicle on the market today provides the range of features and benefits offered by ETFs.

As a result, millions of investors around the world are using ETFs today to profit from market trends. There's just no other way to explain how the ETF market has aggregated over \$1 trillion in assets in just 20 years' time.

Now it's your turn to grab a share of these ridiculous profits.

To get you started, I showed you how you can generate more than \$20,198.16 in dividends. I've revealed my top three ETF dividend payers. And I've exposed three accidental dividend payers to avoid.

Now's the time for you to take action - makes your dreams a reality.

Sincerely,

The ETF Trading Research Team

Examples in these materials are not to be interpreted as a promise or guarantee of earnings or profits. Earning and profit potential is entirely dependent on the person using our product, ideas and techniques. This is NOT a “get rich scheme.”

Your level of success in attaining the results claimed in our materials depends on the time you devote to the program, ideas and techniques mentioned, your finances, knowledge, and various skills. Since these factors differ according to individuals, we cannot guarantee your success or income level. Nor are we responsible for any of your actions.

Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown; in fact, there are frequently sharp differences between

hypothetical performance results and the actual results subsequently achieved by any particular trading program.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk of actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results and all which can adversely affect trading results.
